Telephone cost billing

Call Accounting Manager

Capture, pricing and review of every call from your phone system — in standard, hotel and network editions.

- Standard
- Hotel
- Network

How it works

01 — Phone system
Serial, TCP/IP or database

02 — CAM service
Capture and automatic pricing

03 — MS SQL database
Daily backup

04 — Review and billing
Client/server or web

Overview

CAM (Call Accounting Manager) systems are the best way to increase productivity while reducing telephone operating costs.

Call Accounting Manager (CAM) receives call data from your phone system, prices calls automatically and stores them in a database, ready for review and billing.

It comes in three editions: standard for companies, hotel with room management and guest invoicing, and network for multiple phone systems and sites with central administration.

Capabilities

01

Data capture from the phone system

Over a serial link, TCP/IP or a database interface (SQL / MySQL) for Cisco and Asterisk, with one-way or two-way communication.

02

Every call in one place

Processing of outgoing, incoming and VPN calls, plus a log of unanswered calls.

03

Automatic call pricing

Calls are priced automatically, including for several operators at once.

04

Extension categories

Internal extensions are grouped into categories for a clearer overview.

05

Supported phone systems

Ericsson, Aastra, Avaya, Cisco, Asterisk, Siemens and Panasonic.

06

MS SQL database and backups

Data is kept in an MS SQL database with an automatic daily backup; data collection runs as a Windows service.

Editions

One system, three editions — choose the one that fits your organisation.

01

Standard edition

Capture and pricing of calls from the phone system.

- Data capture via serial, TCP/IP or database (Cisco, Asterisk)
- Outgoing, incoming and VPN calls
- Log of unanswered calls
- Extensions grouped into categories
- Automatic pricing, including multiple operators

02

Hotel edition

For hotels: room management and guest call billing.

- Room management — locking and unlocking phones
- Wake-up calls and voice mail
- Guest name shown on digital phones
- Data forwarded to reception and other subsystems
- Guest invoice printing with hotel surcharge
- Review of billed and unbilled calls and the cash register

03

Network edition

For several phone systems and sites connected over a network.

- Data forwarded to other computers on the network, immediately or daily
- Central system administration
- Selective access to view data
- Data access via a web interface

Technical specifications

Platform	Windows application; data collection runs as a Windows service
Database	MS SQL, with an automatic daily backup
Phone system link	Serial link or TCP/IP; for Cisco and Asterisk also via a database interface (SQL / MySQL)
Communication	One-way or two-way
Data access	Client/server; in the network edition also through a web interface
Editions	Standard, hotel and network

Supported phone systems

Ericsson · Aastra · Avaya · Cisco · Asterisk · Siemens · Panasonic
